Occupation Analysis as a Basis for Vocational Education Curriculum Change
Alaska State Dept. of Education, Juneau Div. of Vocational Education
Pub Date [65]
Note-121p.
EDRS Price MF-$0.50 HC-$6.15
Descriptors-Career Choice, *Employment Statistics, *High School Students, Labor Force, *Occupational Choice, Occupational Surveys, Occupations, *Parents, State Surveys
Identifiers-Alaska

The objectives of the survey were to identify the types of employment available for each population area in Alaska and to determine the occupational goals of high school students in the state, in order to provide a basis for evaluation of vocational education curricula. Of 15,308 high school students enrolled the first week of the 1966-67 school year, 14,581 students reported their father's occupation, mother's occupation, and their own vocational goal. Findings were (1) 91 percent of the students' parents were employed in non-professional occupations, but only 25 percent of the students were receiving non-professional training to fill these existing jobs, (2) 75 percent of the students were receiving pre-college training required to fill 9 percent of the jobs, (3) 6,639 students reported their parents employed in areas utilizing skills learned in trade and industrial education, but only 28 percent of the students were receiving training in this area, (4) 5,099 students reported their mothers as full-time homemakers, and (5) 4,460 students reported their parents employed in areas related to business. The father's occupation, mother's occupation, and the student's vocational goal are tabulated. (PS)

ALASKA LABOR MARKET AREAS

The labor market areas named below, numbered from one to twenty-four, correspond to the numbered areas shown on the cover. Boundaries of these areas are those established by the State Constitution for the original twenty-four election districts. Although several election districts have subsequently been combined, the original areas are being maintained for the purpose of collecting social and economic data.

OCCUPATION ANALYSIS AS A BASIS FOR VOCATIONAL EDUCATION CURRICULUM CHANGE

Compiled by

James R. Beima

for

Division of Vocational Education

1965 (est.)

ACKNOWLEDGEMENTS

The Division of Vocational Education of the Alaska State Department of Education extends sincere gratitude to all persons who contributed to the development of this "Occupational Survey". It is particularly appreciative of the cooperation of the administrators and teachers in the many high schools who shared the results of local surveys.

INTRODUCTION

In Alaska, the first full-time professional person was hired in the Division of Vocational Education when a State Director of Vocational Education and a State Supervisor of Home Economics were employed in July, 1963. Previous to that time, a staff person with the Department of Education acted as Director of Vocational Education along with other duties; and a home economics teacher trainer at the University of Alaska served half time as State Supervisor of Home Economics. The third full-time professional person hired in Vocational Education was the State Supervisor of Manpower, (MDTA). Since then, additional supervisors have been employed to lead the State in educational programs of trades, industrial, and fisheries; distributive education and office occupations; technical; and health occupations.

Until recently adequate trained staff has not been available to conduct this type of study. This then represents the first attempt by the Department of Education, Vocational Division to actuate a State-wide occupational survey, so that local school districts and the Vocational Division can have a common point of reference for evaluating existing vocational programs.

This survey is limited in scope, because it reflects only the occupational background of parents of high school students situated within a large labor force. It did, however, give immediate information as to the occupations of parents of students who would be entering the labor force within the next four years, and indicates how the student viewed himself entering this labor force. Also, this survey may be used by educators to substantiate the need for further research, and determine whether vital statistics of other departments can be coordinated so as to be meaningful to the Department of Education, Vocational Division.

EMPLOYMENT SECURITY WORKFORCE SUMMARY (For Reference Only)

UNITED STATES CENSUS WORKFORCE SUMMARY (For Reference Only)

NEED FOR THIS STUDY

Since the earthquake in 1964, the Alaska Employment Security Office estimates that the work force in Alaska has increased 19.4%. This, coupled with technological change, creates rapidly changing conditions of employment and unemployment. The need is shown for some form of immediate information concerning the labor market which will give an indication as to the probable need for vocational-technical education within any given area of the State, to improve vocational-technical education by providing facts and ideas which will assist educators in making decisions about curricula to be of maximum benefit to the people of Alaska.

PURPOSE AND OBJECTIVES

The purpose of this study is to identify the occupations involving the State's work force so that a substantial percentage of the occupations oriented youth can receive meaningful vocational education and guidance which will eventually lead to employment.

The specific objectives of this study is to obtain facts concerning the types of employment now available for each population area and for the State as a whole, so meaningful curricula can be adopted in each comprehensive high school or area vocational training center.

Another objective is to discover the role that the individual student sees himself playing in tomorrow's labor market, since the type of guidance needed by the student depends upon his frame of reference.

HYPOTHESIS

The general hypothesis of this study *is*, that before meaningful changes in vocational education can be considered, the present occupations of its work force and the occupational goals of today's students must be identified. This information is necessary for administrators and educators to evaluate their present vocational curriculum as it pertains to training tomorrow's work force.

DATA NEEDED

A. The current occupations within each election district and the State as a whole need to be identified, to indicate the pattern of industry within the State.

B. Identification of the work force by sex will assist educators in planning a curriculum to meet the unique needs of male and female students.

C. Student occupational goals need to be charted for the purpose of learning how the student pictures himself in tomorrow's labor market.

PRELIMINARY INVESTIGATION

Interviews of local Chamber of Commerce personnel were conducted to determine what information was available. A preliminary survey of thirty communities failed to show adequate local usable occupational data.

State and Federal agencies were visited to determine whether significant information was available. All State and Federal agencies appeared to be projecting from the 1960 census, using unemployment and job placement figures of the Division of Employment Security for correction. Survey 1958A conducted by the Department of Labor in 1962 contained the information desired but proved to be too expensive and time consuming to operate on an annual basis and was only a 20% sampling.

PROCEDURE

Since most school districts obtain the required information from students at the time of registration, a simple 3 x 5 card was devised which was filled out by the 14,581 high school students in the State and returned to the Division of Vocational Education for tabulation. Data on the employer and the actual job performed will allow use of the Department of Labor's Standard Industrial Code and the Dictionary of Occupational Titles. This utilizes three digits of a five digit code, affording the opportunity of correlating this study with the unemployment and placement reports of the Division of Employment

Security. Following the accepted procedure for acquiring information from schools within the State, authorization from the school superintendents was granted to mail the survey cards to all high school principals the first week of school. Each administrator distributed the cards and instructions to the home room teachers who conducted the survey. The cards were filled out in a home room situation with the teacher acting as supervisor and reading instructions for completing the form, and returned the cards to the principal. The administrator was responsible for returning the cards to the Division of Vocational Education for tabulation.

TREATMENT OF DATA

The survey cards have been coded and tabulated into local employment areas using the Dictionary of Occupational Titles. Tabulated information was related to existing employment and unemployment records maintained by the Department of Labor. The report was compiled and is to be disseminated to each employment area and local school district for curriculum evaluation.

SIGNIFICANCE OF STUDY

This study should provide a basis for establishing meaningful evaluation of vocational education curricula now being offered within the State. The information on the survey cards is also similar to information available on the annual State Internal Revenue Report.

If the survey is codeable, a request can be made through proper channels to obtain this information annually by data processing State Internal Revenue Reports. It should further provide a basis for establishing meaningful research in general education as it relates to the comprehensive high school.

REVIEW OF LITERATURE

The Alaska legislature, through legislative procedures, has implemented a plan and financing for the development of regional high schools. The comprehensive nature of these schools, plus the on-campus boarding school residence of the majority of students, demands innovations in the scope and sequence of vocational courses. Article VII of the Constitution of the State of Alaska states:

> "Section 1. Public Education. The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution."[1]

Further, the Alaska Statutes assign this responsibility to the Department of Education.

> "Section 44.27.020. Duties of the department. The Department of Education shall
>
> (1) administer the state's program of education at the elementary and secondary levels, including programs of vocational education, vocational rehabilitation, library services, and correspondence courses;
>
> (2) administer the historical library and museum;

> (3) plan, finance, and operate related school and educational activities and facilities."[2]

The powers of this department were outlined in Article I of the Alaska Statutes:

> "Section 14.07.030. Powers of the department. The department may
>
> (1) establish, maintain, govern, and operate state-operated schools...
>
> (3) provide for the construction, purchase, rental, maintenance, and equipment of the necessary school buildings or classrooms for state-operated schools...
>
> (5) enter into contractual agreements with the Bureau of Indian Affairs to share boarding costs of secondary school students..."[3]

In 1966, the Alaska legislature acted to send the question of financing school construction with state funds to the voters of the State,

> "Relating to a debt of the state; providing for the issuance of general obligation bonds in the amount of $5,000,000 for the purpose of paying costs of acquiring, constructing, equipping, and making other capital improvements necessitated by the establishment of regional high schools at various locations throughout the state; providing for the submission to a vote of the qualified voters of the state of the proposition of whether or not such bonds may be issued for such purposes; and providing for an effective date."[4]

The Governor's Committee on Education, in its publication, An Overall Education Plan for Rural Alaska, included, under Section VI, a plan for the regional boarding high school.

> "The regional boarding high school should be a comprehensive high school providing education to youth drawn from adjacent outlying areas who will otherwise be denied an opportunity for a high school education. The usual

academic courses will be taught. In addition, the school will provide elective courses including occupational exploratory courses. General education which stresses oral and written expression, reading comprehension, and basic concepts in the field of mathematics and social studies is necessary for all students.

The curriculum and educational program for the State school at Nome and other contemplated boarding schools will be comparable to that planned for regular high schools.

The program will be comprehensive with a major emphasis on vocational curricula supported by basic educational courses presented in a manner designed to complement the vocational education received by the student and to the extent that the student may be eligible to receive a State high school diploma or certificate of course completion.

Regional boarding high schools should take into account the availability of job opportunities in Alaska. However, despite the close ties between education and employability, oversimplified solutions to economic problems through education must be avoided. Specialized vocational training cannot dominate the secondary school program without handicapping the employment potential of the students. Employers insist that as minimum requirements, students should be able to express themselves well, read with comprehension, understand instructions, and have a basic understanding in mathematics. Potential employers indicate they would prefer to train their recruits in the specific and technical aspects of their vocation rather than have the schools attempt this task to the sacrifice of basic skills.

As a long-range goal, boarding high schools should consider post-graduate education and training to prepare rural residents for employment with the U. S. Air Force, the Federal Aviation Agency, the Bureau of Indian Affairs, the U. S. Public Health Service, the State of Alaska, and private businesses. The highly successful RCA program developed to give high school graduates 18 months of technical training to prepare them for electronic specialist positions is illustrative of the possibilities which should be explored. Qualified students should be encouraged to choose academic courses leading to college and professional employment.

Regional boarding high schools with a minimum enrollment of 300 pupils should be established to provide educational opportunities for pupils residing in communities without high school facilities. Advantages would include:

1. An increased opportunity for pupils to attend school in their home villages.

2. An opportunity for rural school children to attend an accredited secondary school with a curriculum sufficiently broad to provide for a wide variety of talents and abilities.

3. An enriched high school curriculum which can be developed on boarding school campuses and in adjacent urban centers but not in isolated villages.

Under no circumstances should a child be forced to leave his family against the wishes of his parents. Where local high schools are not available, correspondence courses should be provided as an alternative, but with the understanding by parents and children that such studies cannot provide the opportunities for social and cultural development found in regular high school programs.

Criteria for Establishing Regional Boarding High Schools

1. In order to provide a broad curriculum including sufficient electives for the non-academically- and academically-inclined student, a minimum enrollment of 300 students is necessary.

2. Where practicable, students should enroll in the regional high school nearest their homes, but schools should be open to all eligible children of the State.

3. Costs of construction and shipping must be taken into consideration so that the best school plant facilities can be obtained for the amounts expended.

4. The school should be located so that it is easily accessible to students and members of the professional staff. This criterion implies a location near a major transportation hub.

5. Wherever possible, existing school facilities should be utilized for regional boarding high schools.

6. Adequacy of existing community facilities such as water, sewers, and fire protection should be taken into account in determining school centers and sites.

7. The community should have a sense of responsibility and indicate active support for the youth residing in the community and for those students brought into the school from adjoining villages.

8. Consideration should be given to employment and cultural opportunities. The school should not be an isolated entity but should be a true community school. It is essential that a free interchange of activities between the school and the community be encouraged.

The organized districts should operate those boarding schools located within their boundaries. The State or the BIA would reimburse the school district for the cost of educating the nondistrict students.

In the event that some of the smaller school districts have excess space, the State should explore the possibility of placing boarding school students from the rural areas in these schools. This may require, in some cases, placement of children in approved homes near the school location.

Representatives from the State Department of Education and the Bureau of Indian Affairs should make concerted efforts to insure that boarding school space is utilized effectively. Applicants for admission to any boarding school should be screened by officials from both agencies to help insure placement of students in schools nearest their homes (assuming space availability) and in schools providing programs most appropriate for a particular student in light of his abilities and interests."[5]

In contrast to the before mentioned readings, Charles K. Ray, in his report, A Program of Education for Alaskan Natives, makes the following observations:

> "...Dropouts calculated by number of years that students were in attendance showed a strong tendency toward lack of initial adjustment to boarding school life and the high school program...."[6] "In addition, the problems inherent in the boarding school situation are contributing factors. In reality, however, the problem is far more complex than one which merely concerns homesickness, the inability to adjust to boarding school living, or unfamiliar geographical surroundings on the part of the pupils. Failure in school work, retention in grade, overageness, family background, and the rigid academic nature of the curriculum were all considered to be causes for the high dropout rate in Nome...."[7]
>
> "No general agreement exists as to the size of an ideal high school. The National Commission on School District Reorganization recommends a minimum enrollment of 300 pupils. While initial enrollments in the suggested regional high school would not meet the recommended minimums, there are reasons for predicting gradual yet steady growth, so that eventually these standards might be met."[8]
>
> "...In a school of this size, a comprehensive program can be provided which will offer college preparatory courses, commercial subjects, opportunities for vocational exploration, and perhaps actual work experiences. Such a plan appears promising only in the event that a wide variety of curricular offerings can be made available in the local high schools."[9]

Elladean Bittner in her study, Employment Opportunities for Women in Alaska, made a collection of data pertaining to gainful and useful occupational skills of women in Alaska. It was helpful in evaluating the rural or native responses in relation to subjects.

The publication, Alaskan Native Population and Employment Prospects, 1960-2000, by Dr. George W. Rogers reports a comprehensive statistical study of the native population and is helpful in evaluating the role of the regional high school in relation to the native population.

Wilbur Smith and Associates made a job survey along the Alcan Highway to determine the availability of qualified highway technicians. The study was based on figures compiled in the U. S. Census Report of 1961 and brought up to date by using the 1965 Employment Security employment-unemployment figures.

CHARTS

1) Enrollment Chart

2) Student Opinion Chart

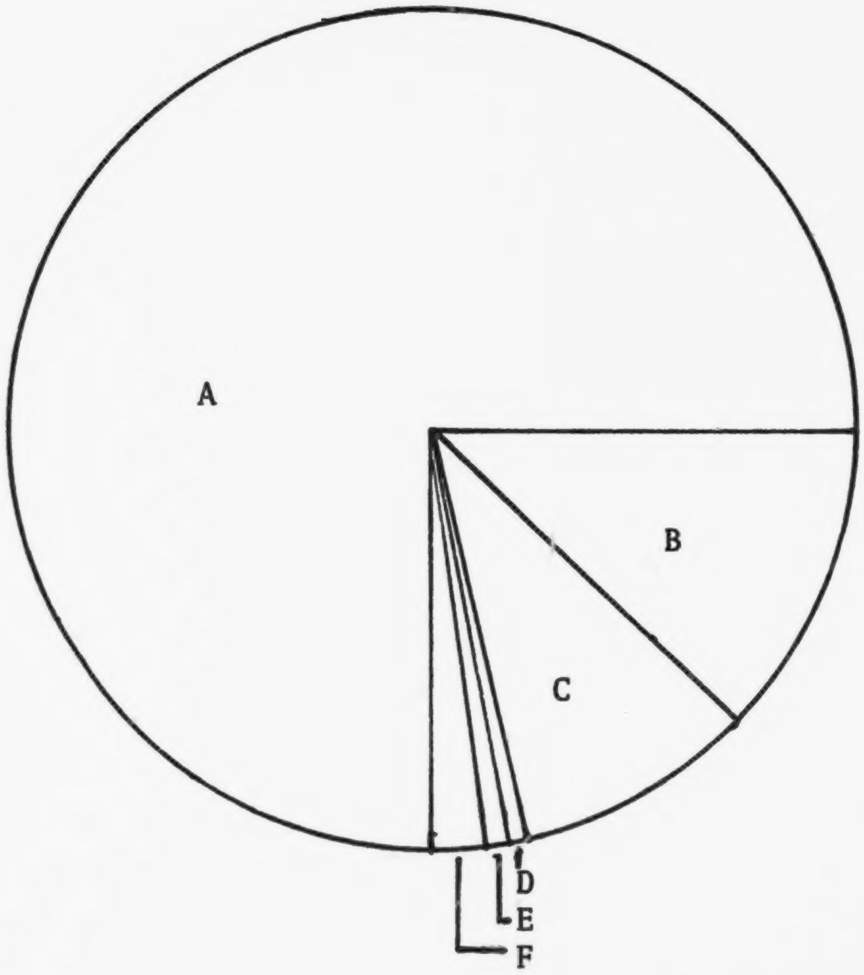
3) Parents' Employment Chart

ENROLLMENT CHART

The actual vocational enrollment figures were obtained from the Department of Education, Division of Vocational Education, report form 712B. As the chart indicates, only 25% of the students, 3645, are presently enrolled in vocational education programs, and 75% are enrolled in the non-vocational programs.

ENROLLMENT CHART

PERCENTAGE OF HIGH SCHOOL STUDENTS ENROLLED IN VOCATIONAL AND NON-VOCATIONAL PROGRAMS, STATE OF ALASKA, 1966



A. NON-VOCATIONAL 75%

B. HOMEMAKING 11.6%

C. OFFICE 8.6%

D. AGRICULTURE .4%

E. DISTRIBUTION 1.5%

F. INDUSTRIAL 2.8%

1.	Automotive	.9%
2.	Electronics	.3%
3.	Drafting	.2%
4.	Machinist	.8%
5.	Carpentry	.6%

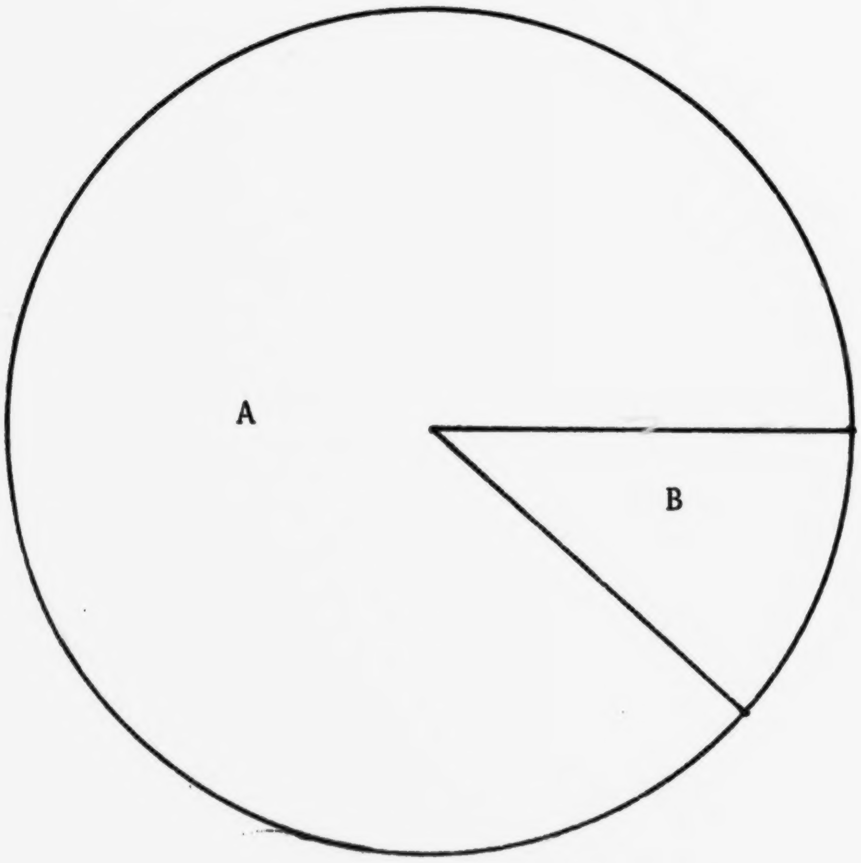
PARENTS' EMPLOYMENT CHART

The term "professional" is described in the Vocational Act of 1963:

> Funds under the 1963 Act will not be available for instruction which is designed to fit individuals for employment in recognized occupations which are generally considered to be professional or as requiring a baccalaureate or higher degree. Such as; accountants and auditors, actors, architects, artists, athletes, authors, editors, clergymen, engineers, lawyers, librarians, life scientists, mathematicians, medical and health professions, musicians, physical scientists, social workers, social scientists, teachers and other educators.

PARENTS' EMPLOYMENT CHART

PERCENTAGE OF HIGH SCHOOL STUDENTS PARENTS' EMPLOYED IN PROFESSIONAL AND NON-PROFESSIONAL OCCUPATIONS, STATE OF ALASKA, 1966



A. NON-PROFESSIONAL	91.8%	B. PROFESSIONAL	9.2%

SUMMARY OF FINDINGS

SUMMARY OF FINDINGS

14,581 High school students reported the occupations their parents were engaged in, and related their own job aspirations. Since 15,308 students were enrolled the first week of school, this study represents a 95% sampling of high school students enrolled in the 1966-67 school year.

6,639 High school students reported their parents' employed in areas utilizing the skills learned in trade and industrial education, yet only 2.8% of the students are receiving training in this area.

5,099 High school students reported thier mothers' performing the role of full-time homemaker. This goes against the theory that most women in Alaska work in the labor force, and shows the need for greater emphasis on "useful" home economics.

4,460 High school students reported their parents' employed in areas related to business, indicating a growing need for students to be trained in business education.

1,871 High school students reported their fathers' employed in the armed services. The armed services represents the largest single employer of high school students parents' in the State of Alaska. This shows the mobility of some of our high school students, and the additional planning needed to meet their needs.

1,497 High school students reported no mother in household, again showing the need for useful home economics, home recreation programs, and adult training programs.

1,302 High school students reported their parents employed in jobs requiring professional training. Since this represented only 9% of the total jobs recorded, it emphasizes the growing need in Alaska for vocational education.

1,132 High school students reported their parents' employed in service areas related to industry, showing the need for gainful home economics training programs.

Concerning the topic of regional vocational high schools, only three areas meet the requirements for establishing and maintaining a regional vocational school. Anchorage represents the only area with a work force large enough to train and employ students needing practical work experience. The University of Alaska at College, Alaska represents the State as a center of learning, and most experimental programs in vocational education should be conducted under the direction of the University, thereby utilizing existing research facilities. Ketchikan represents one of the larger industrial areas of the State, and should be considered as a training site for those requiring industrial education.

CONCLUSIONS AND IMPLICATIONS

Though this study is limited in scope, it did show definite need for Alaska youth to receive opportunities for training in the vocational and technical occupations.

Ninety-one per cent of student's parents were employed in non-professional occupations, but only twenty-five per cent of the students were receiving non-professional training to fill these existing jobs. Seventy-five per cent of the students were receiving pre-college training required to fill nine per cent of the jobs.

Rural education should be based somewhat on skills which the village people deem necessary for success, and jobs presently being performed within the State.

1. Since, no determined goal or objective is identified concerning the future of the rural school.
2. Since, there are no studies available on the effect that bringing a large group of under-achievers into areas where schools are presently being proposed.
3. Since, the school drop out rate in rural Alaska indicates that the socio-economic handicapped child does not always respond to the type of general education offered in the lower forty-eight.

As shown in Chart I, the number presently enrolled in vocational education indicates that the current vocational educational program in Alaska is too narrow in scope. Not only is the course content narrow with respect to course offerings, but the instructional content within existing courses is not as broad as vocational educators in the field recommend. It is recommended that an extensive pre-employment, or job orientation, curriculum be developed within the comprehensive high school leading to cooperative vocational classes at the twelfth grade level.

1. This program would allow the drop out rate of students who don't normally respond to the traditional academic program, by giving the academic drop out an avenue of accomplishment.
2. This program would allow the comprehensive high school to broaden its pre-vocational and basic education programs.
3. It would allow the college bound student an opportunity of receiving a pre-occupational experience that he/she might use to further his/her educational pursuits, or be utilized in making a living after completion of his/her academic training.

APPENDIX
OF DOCUMENTATION OF
SURVEY DEVELOPMENT

FORM SA 1B
10M 11 64

MEMORANDUM

State of Alaska

TO: Mrs. Mildred Foster
Acting Director
Vocational Education

DATE : August 2, 1966

FROM: James R. Beima, Supervisor
Distributive Education and
Office Occupations

SUBJECT: Job Survey Meeting -
Depts. of Labor, Revenue,
and Education

Those in attendance: Department of Revenue - D. G. Williams, Deputy Commissioner, Marvin Kennedy, Director of Revenue Audit, and Gerald Couzin; Department of Labor - Fred Lupro and John Messinger; and the Department of Education - Commissioner Zahradnicek, R. W. Matthews, and myself.

We discussed the possibility of using the State income tax form for the purposes of our job survey. It was my responsibility to define the problem and outline the purposes of the survey that is needed by the Division of Vocational Education. (See attached sheets, which we had previously agreed upon.) After we had discussed the problems and purposes of the survey, Form #1958 was introduced which was used by the Department of Labor for a survey in 1962. I indicated that this particular form was approximately the information we would like to receive - occupational title, town or place of employment, sex, age, length of time in occupation, etc. This was discussed by all members present and we finally decided to get samples of the revenue forms from last year and see if the information can be obtained. These forms, after review, will be made into a request to the Department of Labor for them to turn over, and we will both review them. If we agree that this information can be taken off the revenue forms, we will make a recommendation from both Departments to the Lockheed representative so that it will be included in their report. We will eventually run all this information through Data Processing.

Tentative review will probably begin next week.

STATE OF ALASKA

DEPARTMENT OF EDUCATION

DIVISION OF VOCATIONAL EDUCATION

WILLIAM A. EGAN, GOVERNOR

Pouch F

ALASKA OFFICE BUILDING — JUNEAU 99801

August 19, 1966

Dear School Administrator:

In order to obtain accurate figures relative to employment in Alaska in establishing occupational training needs, the Division of Vocational Education is asking your cooperation as school begins this fall.

Commissioner Zahradnicek feels you would be willing to cooperate by having all of your high school students, during the opening week of school, complete a 3x5 card indicating the employment of both his/her father and mother, giving the name of the parents' employer.

Mr. James R. Beima, Supervisor, Distributive Education and Office Occupations, has assumed the responsibility of having a sufficient number of cards printed to send each high school in quantity appropriate to the number of pupils enrolled.

Would you please complete the enclosed form and return it at your earliest convenience so that printed cards may be sent to you for completion at registration or in homeroom, whichever you decide, at the opening of school. With the cards will be sent a self-addressed stamped envelope for your convenience in returning the data to the Division of Vocational Education.

Thanks for your cooperation.

Sincerely,

(Mrs.) Mildred Foster
Acting Director
Vocational Education

STATE OF ALASKA
DEPARTMENT OF EDUCATION
DIVISION OF VOCATIONAL EDUCATION

WILLIAM A. EGAN, GOVERNOR

Pouch F
ALASKA OFFICE BUILDING — JUNEAU 99801

MEMORANDUM #81 August 22, 1966

TO: Public High School Administrators

FROM: Office of the Commissioner of Education

SUBJECT: Labor Market Survey

At the MDTA-Vocational Education Conference held in Juneau on June 15, 1966, the Division of Vocational Education was requested to obtain adequate information concerning the labor market within any given area of the State of Alaska. Guidelines could then be prepared and used by the local school districts for evaluation of presently operated vocational programs, and the consideration of new vocational program needs. The information could also be used by the Division of Vocational Education and the Department of Labor in locating regional training centers that will allow optimum vocational education throughout the State.

It will take about 18 months to establish a perpetual survey concerning the labor market, specifically: (1) establish an interdepartment coordinator, (2) create and find interview teams, and (3) coordinate reports for in-put and out-put by computer.

High schools can assist in obtaining immediate survey data on occupations in Alaska by having all high school students fill out the enclosed card at registration time, in a homeroom situation or a first period class. Please return the completed cards to the Division of Vocational Education, State Department of Education, Pouch F - Alaska Office Building, Juneau, in the self-addressed, stamped envelope, immediately after school starts.

Thank you for assisting in obtaining this occupational data. The results will be tabulated and a correlation made to a job survey completed by the Department of Labor in 1962. We hope to have a report of findings by November 1 concerning the employment areas in your community.

(Mrs.) Mildred Foster
Acting Director
Vocational Education

Encls

LABOR MARKET SURVEY

TABLES

ACCORDING TO ELECTION DISTRICTS

All information obtained from high school students as reported at the beginning of school year 1966-67, stating father's occupation, mother's occupation and the student's vocational goal.

LABOR MARKET SURVEY

TABLES

The third edition of the Dictionary of Occupational Titles, United States Department of Labor, was used to code the students parents' occupations, and the students vocational goal.

In the left hand column is a three digit code listing of each occupation identified in the survey. The students vocational goal is listed by a two digit code which refers to the three digit code, in the left hand column, by general grouping rather than by specific occupations. The students were not employed by a specific employer, making it impossible to use the three digit listing.

ALASKA'S WORKFORCE SUMMARY

as taken from

EMPLOYMENT SECURITY RECORDS

(For Reference Only)

INTRODUCTION

This publication contains monthly estimates of total civilian employment and unemployment in each of Alaska's twenty-four labor areas. 1/ The sum of the total civilian employment and unemployment is the civilian workforce. Only persons who are both able and willing to accept employment are considered a part of the workforce. The workforce concept provides a measure of the human resources which are currently available as a result of people freely choosing to enter the job market as it now exists.

The tables also contain monthly unemployment rates, which indicate the percent of the workforce not utilized. The percent of the workforce unemployed is generally recognized to be one of the most valid overall indicators of the efficiency of the economy, since the nonutilization of available human resources results in a net loss of the goods and services they would have produced if working.

The definitions of employment and unemployment which are reflected in these tables correspond closely to those used nationally in the monthly household survey conducted for the Bureau of Labor Statistics by the Bureau of the Census. The total employment figures include self-employed persons, unpaid family workers, domestics, agricultural workers, and workers directly involved in a work stoppage, as well as nonagricultural wage and salary workers. The figures for the nonagricultural wage and salary component of total employment are shown separately and are subdivided into major industry divisions.

Wherever possible, employment data were obtained directly from employer sources. Data covering almost all wage and salary workers in private industry were available from the insured employment reports which private employers file quarterly with the Alaska Employment Security Agency. Similary, the employer reports for the unemployment insurance program covering Federal employees provided reliable data for all Federal employment. State and local government employment was available from reports which these government units send to the Employment Security Agency in co-operation with the Current Employment Statistics program of the U. S. Bureau of Labor Statistics.

Due to the use of employer sources of data, the area employment figures in these tables are not, in all respects, directly comparable to those developed through the household surveys conducted by the Bureau of the Census. Perhaps the most important difference between the two kinds of figures is that the employment estimates in this publication are based on establishment data, and therefore show employment by the place in which the work was performed. In a census of households, area employment figures reflect the place of permanent residence of the worker, although he may have commuted or moved temporarily to another area to be near his job.

In certain categories of noncovered employment, employer sources of data do not exist on a continuous reporting basis. For these categories, employment estimates were prepared from special surveys, projections of the 1960 Census figures, and from by-product statistics of the Old Age and Survivors Insurance program.

Techniques developed by the U.S. Bureau of Employment Security were used in producing total unemployment estimates. These unemployment estimates cover all jobless persons looking for work, regardless of whether or not they qualify for unemployment insurance benefits.

For both employment and unemployment, all of the figures for individual labor areas are unrounded even where the published figures are estimates rather than firm figures. The decision to publish unrounded figures was dictated by convenience rather than confidence that the estimates are accurate to the one digit level. All figures for the State have been rounded to the nearest hundred.

1/ These labor market areas correspond to the original twenty-four election districts defined in the State Constitution.
